

SkillBridge – Data Platform for Adult Re-Education and Employment

SDG 4 - Quality Education.

SDG 8 - Decent Work and Economic Growth.

The Need (Global Challenge)

Many older adults and unemployed individuals struggle to re-enter the workforce because their skills are outdated or no longer relevant in the modern digital economy. At the same time, companies report skill shortages in areas such as data analysis, digital marketing, programming, and IT support. There is a gap between the skills people have and the skills employers need. Lifelong learning and reskilling programs are essential to reduce unemployment and economic inequality.

Problem Statement

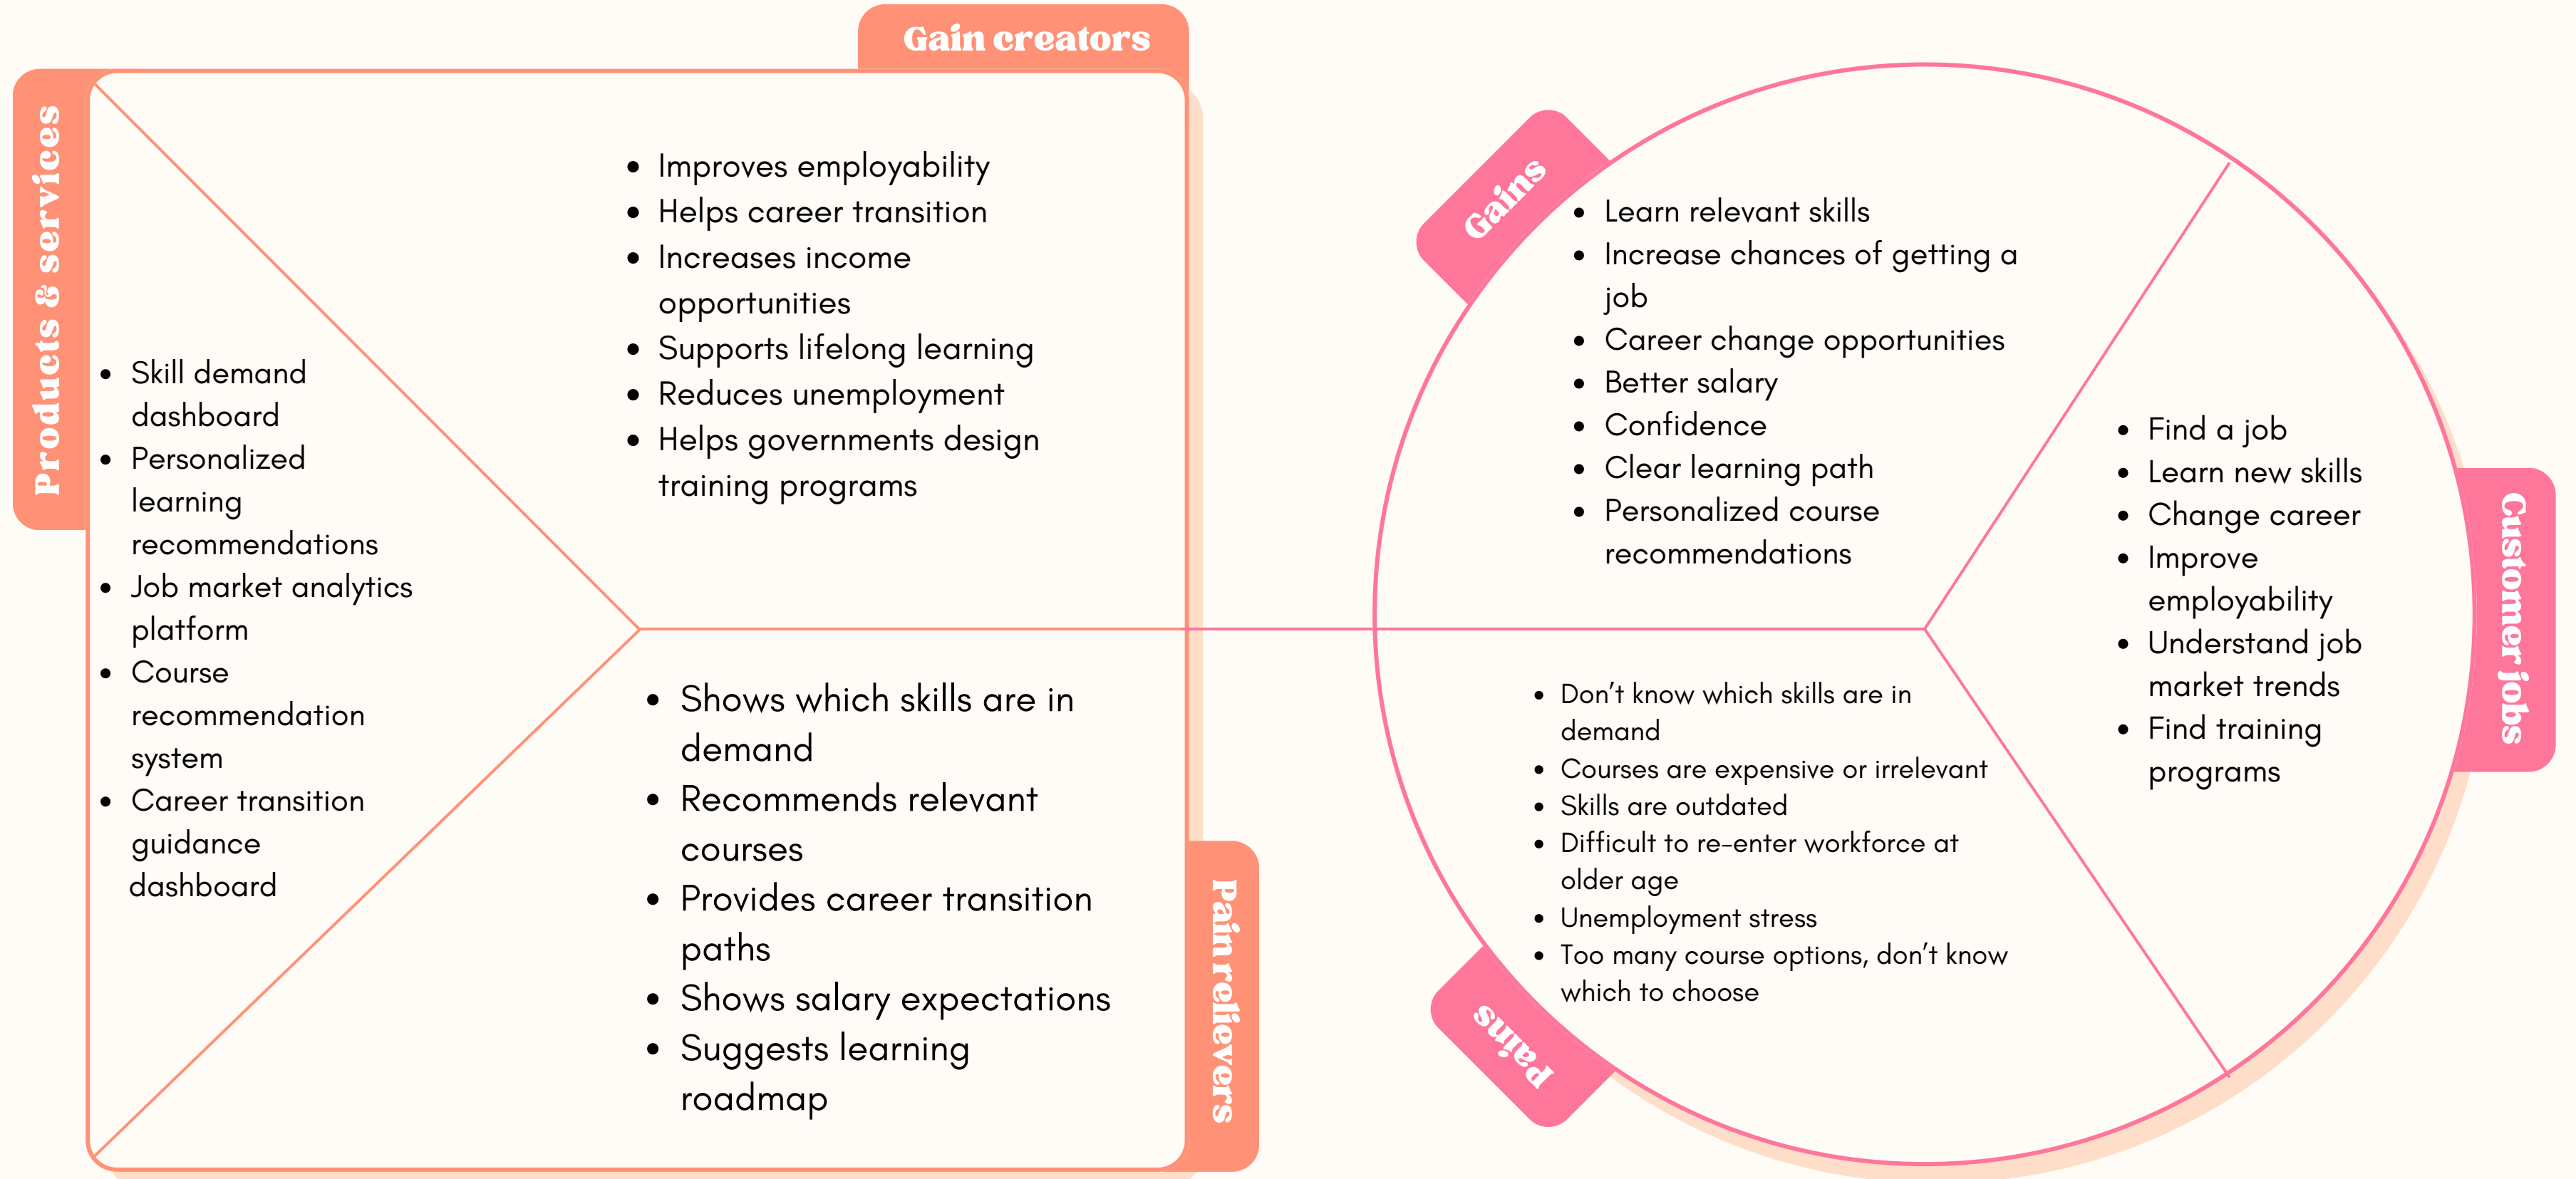

Many unemployed adults and older workers face difficulties re-entering the workforce due to outdated skills and lack of access to targeted education programs aligned with current labor market demands. At the same time, employers struggle to find workers with the necessary digital and technical skills. Our data product aims to analyze labor market data, identify in-demand skills, and recommend personalized learning paths and training programs to help unemployed and older adults reskill and improve their employment opportunities.

Objectives of the Data Product

The objective of this data product is to use labor market and education data to recommend personalized learning paths for unemployed and older adults. The platform will identify in-demand skills, suggest relevant courses and training programs, and provide insights into job market trends. This will help individuals improve their employability and support lifelong learning, contributing to SDG 4 (Quality Education) and SDG 8 (Decent Work and Economic Growth).

Value Proposition Canvas

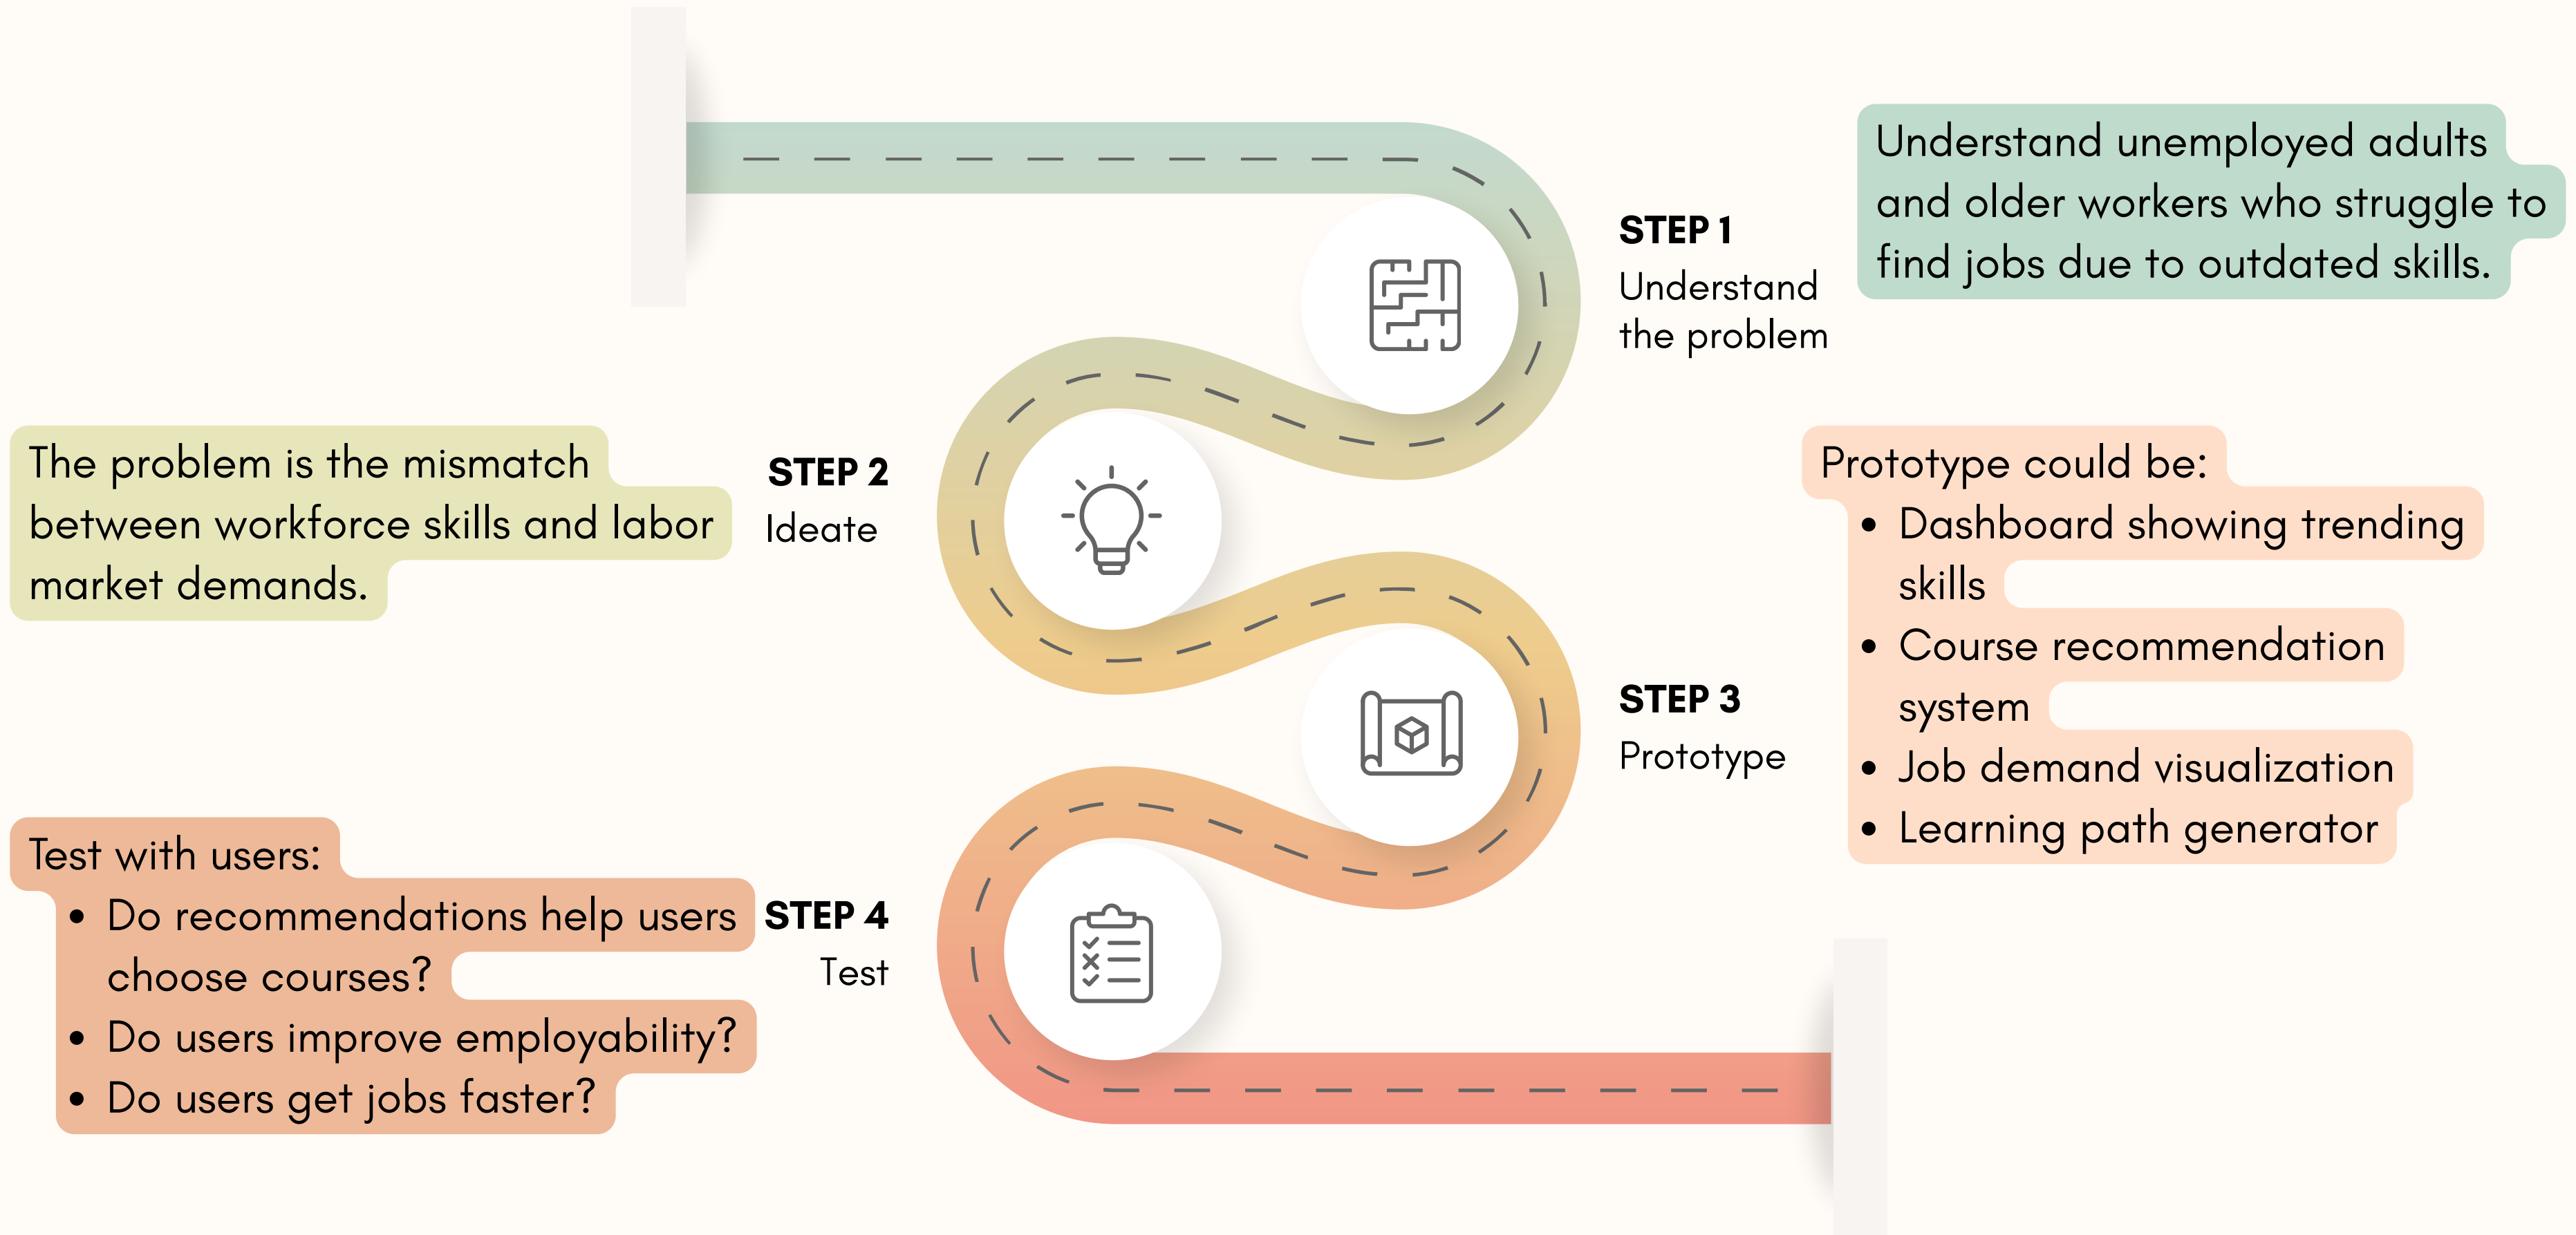

Value Proposition Statement

For unemployed adults and older workers who need to update their skills and re-enter the workforce, our data-driven education platform provides personalized learning recommendations based on real-time labor market data. Unlike traditional education programs that offer generic courses, our platform analyzes job trends, skill demand, and employment data to recommend relevant training paths that improve employability and support lifelong learning.
